Submitted to the
National Aeronautics and
Space Administration

NASA Proposal Number

TBD on Submit

NASA PROCEDURE FOR HANDLING PROPOSALS

This proposal shall be used and disclosed for evaluation purposes only, and a copy of this Government notice shall be applied to any reproduction or abstract thereof. Any authorized restrictive notices that the submitter places on this proposal shall also be strictly complied with. Disclosure of this proposal for any reason outside the Government evaluation purposes shall be made only to the extent authorized by the Government.

SECTION I - Proposal Information

Principal Investigator Genaro Carrasco Ozuna		E-mail Address		Phone Number	
Street Address (1)			Street Address (2)		
City		State / Province		Postal Code	
				Country Code	
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program					
Proposed Start Date 01 / 13 / 2026		Proposed End Date 01 / 30 / 2027		Total Budget No budget required	

SECTION II - Application Information

NASA Program Announcement Number NNH25ZDA001N-LWS		NASA Program Announcement Title B.3 Living with a Star Science			
For Consideration By NASA Organization <i>(the soliciting organization, or the organization to which an unsolicited proposal is submitted)</i> NASA , Headquarters , Science Mission Directorate , Heliophysics					
Date Submitted		Submission Method Electronic Submission Only		Grants.gov Application Identifier	
				Applicant Proposal Identifier NNH25ZDA001N-LWS	
Type of Application New		Predecessor Award Number		Other Federal Agencies to Which Proposal Has Been Submitted	
International Participation No		Type of International Participation			

SECTION III - Submitting Organization Information

UEI		EFT		CAGE Code		Employer Identification Number (EIN or TIN)		Organization Type	
Organization Name (Standard/Legal Name)							Company Division		
Organization DBA Name							Division Number		
Street Address (1)					Street Address (2)				
City			State / Province			Postal Code		Country Code	

SECTION IV - Proposal Point of Contact Information

Name Genaro Carrasco Ozuna		Email Address Geozunac3536@gmail.com		Phone Number 52-812-5989869	
--------------------------------------	--	--	--	---------------------------------------	--

SECTION V - Certification and Authorization

Certification of Compliance with Applicable Executive Orders and U.S. Code

By submitting the proposal identified in the Cover Sheet/Proposal Summary in response to this Research Announcement, the Authorizing Official of the proposing organization (or the individual proposer if there is no proposing organization) as identified below:

- certifies that the statements made in this proposal are true and complete to the best of their knowledge;
- agrees to accept the obligations to comply with NASA award terms and conditions if an award is made as a result of this proposal; and
- confirms compliance with all provisions, rules, and stipulations set forth in this solicitation.

Willful provision of false information in this proposal and/or its supporting documents, or in reports required under an ensuing award, is a criminal offense (U.S. Code, Title 18, Section 1001).

Authorized Organizational Representative (AOR) Name		AOR E-mail Address		Phone Number	
AOR Signature <i>(Must have AOR's original signature. Do not sign "for" AOR.)</i> Digitally signed by				Date	

PI Name : Genaro Carrasco Ozuna		NASA Proposal Number TBD on Submit	
Organization Name :			
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program			
SECTION VI - Team Members			
Team Member Role PI	Team Member Name Genaro Carrasco Ozuna	Contact Phone	E-mail Address
Organization/Business Relationship		UEI	EFT CAGE Code
International Participation No	U.S. Government Agency		Total Funds Requested 0.00

PI Name : Genaro Carrasco Ozuna	NASA Proposal Number
Organization Name :	TBD on Submit
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program	
SECTION VII - Project Summary	
<p>This proposal addresses a critical challenge in the Living With a Star (LWS) program: the reliable interpretation and validation of space-weather predictions in the presence of heterogeneous, noisy, and sometimes contradictory solar data and models.</p> <p>Rather than developing new solar physics models, this work focuses on a meta-level framework that evaluates the internal coherence, stability, and entropy evolution of existing space-weather prediction pipelines.</p> <p>Scientific Motivation</p> <p>Solar variability affects technological and biological systems across space and Earth. While current models capture many physical mechanisms, operational challenges persist due to:</p> <p>inconsistent predictions across models,</p> <p>false alarms and missed events,</p> <p>lack of formal veto mechanisms when model confidence is unjustified.</p> <p>These issues represent not a lack of physics, but a lack of coherence-based validation.</p> <p>I propose to develop and test a framework that:</p> <p>Quantifies coherence metrics across multi-source solar and heliospheric datasets.</p> <p>Tracks entropy evolution of prediction outputs to identify unstable or misleading alerts.</p> <p>Implements an entropy-based veto mechanism that prevents low-coherence predictions from propagating into operational decision layers.</p> <p>Identifies causal precursor windows associated with transitions in solar-terrestrial coupling.</p> <p>Relevance to Living With a Star</p> <p>This work directly supports LWS objectives by improving:</p> <p>reliability of space-weather alerts,</p> <p>interpretability of model disagreements,</p> <p>operational trust in prediction systems.</p> <p>By focusing on validation and coherence rather than new physics, the framework is designed to integrate with existing NASA models and datasets.</p>	

PI Name : Genaro Carrasco Ozuna				NASA Proposal Number TBD on Submit	
Organization Name :					
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program					
SECTION VIII - Other Project Information					
Proprietary Information					
Is proprietary/privileged information included in this application? Yes					
International Collaboration					
Does this project involve activities outside the U.S. or partnership with International Collaborators? No					
Principal Investigator No	Co-Investigator No	Collaborator No	Equipment No	Facilities No	
Explanation :					
<div></div>					
NASA Civil Servant Project Personnel					
Are NASA civil servant personnel participating as team members on this project (include funded and unfunded)? No					
Fiscal Year	Fiscal Year	Fiscal Year	Fiscal Year	Fiscal Year	Fiscal Year
Number of FTEs	Number of FTEs	Number of FTEs	Number of FTEs	Number of FTEs	Number of FTEs

PI Name : Genaro Carrasco Ozuna		NASA Proposal Number TBD on Submit
Organization Name :		
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program		
SECTION VIII - Other Project Information		
Environmental Impact		
Does this project have an actual or potential impact on the environment? Yes	Has an exemption been authorized or an environmental assessment (EA) or an environmental impact statement (EIS) been performed? No	
<div>Environmental Impact Explanation: Environmental and sustainability relevance arises through reduced satellite losses, avoided infrastructure damage, and minimized unnecessary operational actions, leading to lower lifecycle resource consumption</div>		
<div>Exemption/EA/EIS Explanation:</div>		

PI Name : Genaro Carrasco Ozuna	NASA Proposal Number
Organization Name :	TBD on Submit
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program	
SECTION VIII - Other Project Information	
Historical Site/Object Impact	
Does this project have the potential to affect historic, archeological, or traditional cultural sites (such as Native American burial or ceremonial grounds) or historic objects (such as an historic aircraft or spacecraft)?	
No	
Explanation:	

PI Name : Genaro Carrasco Ozuna	NASA Proposal Number
Organization Name :	TBD on Submit
Proposal Title : Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program	
SECTION IX - Program Specific Data	
<p>Question 1 : Short Title: Answer: Coherence-Driven Validation and Entropy-Based Veto for Space Weather Prediction under the Living With a Star Program</p> <p>Question 2 : Team members not confirmed via NSPIRES Answer: While this work does not directly target environmental remediation, it has measurable indirect environmental benefits through improved reliability and efficiency of space-weather prediction and decision-support systems. Enhanced coherence-based validation of space-weather models can reduce false alarms and missed events, enabling more accurate and proportionate operational responses. This improvement can lead to fewer unnecessary satellite maneuvers, reduced fuel consumption, and extended operational lifetimes of space assets, thereby lowering the demand for replacement launches and associated material and energy expenditures. On Earth, more reliable interpretation of solar and geomagnetic activity supports better protection of electrical power infrastructure and other vulnerable technological systems. By enabling earlier and more trustworthy warnings, this work can help prevent damage to large-scale components such as transformers, whose replacement involves significant industrial processes and environmental cost. The proposed framework is software-centric and designed to integrate with existing datasets and models, resulting in a low direct environmental footprint. Computational methods emphasize lightweight metrics and validation layers rather than extensive retraining of large models, aligning with efficient use of computational resources. Overall, the environmental relevance of this work arises from risk reduction, asset longevity, and avoidance of unnecessary high-impact interventions, contributing to more sustainable operation of space-based and ground-based technological systems affected by solar variability.</p> <p><i>Hidden for Dual Anonymous Peer Review</i></p> <p>Question 3 : Focused-Science Topic Answer: FST3: Tormentas similares, efectos diferentes: comprensión del acoplamiento iónico neutro a través de escala que impulsa la respuesta temporal global a tormentas geomagnéticas</p> <p>Question 4 : Research Regime Answer: Sistema-Interdisciplinario</p> <p>Question 5 : Science Topic Answer: Clima espacial</p> <p>Question 6 : AI or ML? Answer: Yes</p>
